Basics

- [Data Types](#)
- [Identifiers and Keywords](#)

Expressions

- [Operators](#)
- [Intrinsic Functions](#)
- [Constants](#)

Shapes

- [Assignment](#)
- [Breakpoint](#)
- [Call](#)
- [Comment](#)
- [Declare](#)
- [Do](#)
- [For](#)
- [If](#)
- [Input](#)
- [Output](#)
- [While](#)

Program Templates

Flowgorithm's Source Code Viewer allows flowcharts to be converted to several real-world programming languages. This generated source code is created by using program templates.

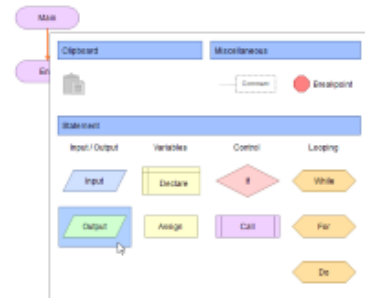

This documentation outlines the format and Flowgorithm program templates.

[Documentation](#) ▶

Tutorial

This short tutorial shows how to create the classic *Hello World* program.
